

## About the Owner

It started when I was ten years old with my lawnmower repair business in my parents' backyard. The Little League fields were right by my house and I decided to try and get some business. After reading my "Lawn Mower Repair" sign, skeptical adults would drop off their lawnmower to a ten year old before one game and picked up their repaired lawnmower before the next ... AMAZED that a ten year old just fixed their lawnmower.

Then came my love of dirt bike racing. To be more competitive, I was always thinking of new ways to become faster. In order to keep bikes operating at peak performance, machining of specialized light and superior designed replacement parts became part of the picture. At that time, I knew my love of machining, out-witting the competition and problem-solving innovations would be the career I was passionate about.

To specialize further, precision grinding was another specialty skill that I could not curb my enthusiasm for. Fast-forward thirty-five years and there's a broad range of knowledge, engineering, and problem-solving experience that has evolved into a full-service tool & die shop. We stand on our reputation that spans years of dependable service to our customers.

Even now, with the threat of foreign competition, we have found that there is yet a profound domestic need for high quality precision know-how, talent and experience. At Schultz Precision Tooling, we currently service customers in the Aerospace, Military, Consumer Electronics, Medical, Automotive, and Appliance industries. Our understanding of the precision tool manufacturing field is outstanding with customers who have been with us for decades.

While this website also shows a brief overview of some of our work, we must respect and observe the proprietary principles of our valued customers. All the same, we will provide you with the best American-made services along with aggressive pricing that helps you achieve your operating and business goals. Please give us a call, fax, or email your prints to us and we will be pleased to quote your next tooling need.

Thank you,

Keith A. Schultz  
Owner - Schultz Precision Tooling
